- CWE is the Critical Work Envelope that defines an area of significance within a clean space based on activities and occupancy
- AORTA size is the Length x Width of the Critical Work Envelope. Geometrically, the size is the nominal dimension to the inside of the Model MVC perimeter air curtains.
- The CUBE is defined as the volume of space within the perimeter air curtains from floor to ceiling.
- CUBE ACH Min is the Air Change Rate / Hour for the CUBE area, based on the Min Room CFM shown. These air change rates will increase when Room CFM air flow rates are selected above the minimum shown.

- The Room CFM is proportioned with 2/3 feeding the Model MVC perimeter air curtain diffusers, and the remaining 1/3 providing the central Laminar flow panels, Models MV-2, MV-HEP, or MV-1.
- Systems 31, 42, 53, & 64 provide flexibility in design capacities to meet the required velocities for proper system operation.

TABLE 4: MODEL MVC PERIMETER AIR CURTAINS / PERFORMANCE DATA

NC	System 31			System 42				System 53				System 64		
	CFM / Lin ft			CFM / Lin ft				CFM / Lin ft				CFM / Lin ft		
22	22	25	30	30	35	40	45	45	50	55	60	60	70	80

30			7"		7"	8"	9"	9"	12x6	12x6	18x6	18x6	18x6	
35			6"		6"	7"	8"	8"	9"	9"	12x6	12x6	12x6	18x6
40						6"	7"	7"	8"	8"	9"	9"	9"	12x6
45							6"	6"	7"	7"	8"	8"	9"	9"
Ps	0.04	0.04	0.06	0.06	0.07	0.09	0.13	0.11	0.14	0.15	0.15	0.12	0.15	0.19

- The data table above relates inlet size, system size, and flow/lineal foot of air curtain with space NC.
- Suggested inlet sizes shown are round, top collars for simplified duct connections OR rectangular side connections to meet capacity, sound, and pressure levels shown. AORTA systems are highly customizable to solve challenging installations and are designed for the application.

Sound Levels

- NC is noise criteria curve that will not be exceeded at the operating point. This is determined by assuming a 10dB (ref: 10⁻¹² watts) room attenuation that is subtracted from the power levels in each of the 2nd thru 7th octave bands.
- The NC values shown have been adjusted to reflect the additive sound of the MVC perimeter air curtain diffusers. The proper selection of the central Laminar flow panels will not influence the resultant NC.

Test Standard

- ANSI / ASHRAE standard 70

Pressure

- P_s represents Static Pressure, inches of water for each MVC curtain air diffuser.
