Model **TRV** THROW REDUCING VANES

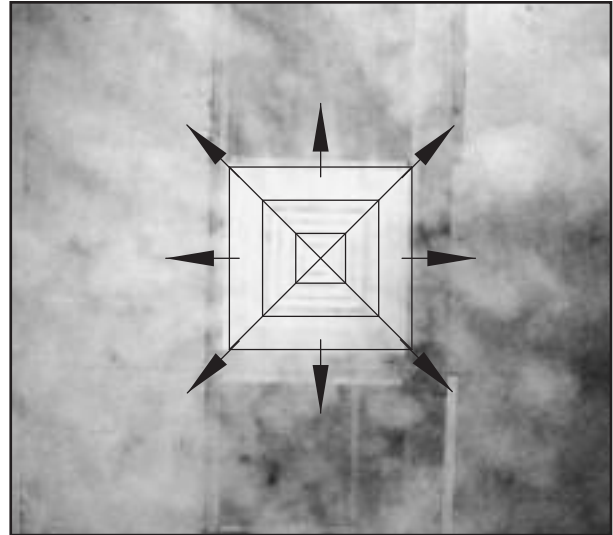

DIFFUSER ACCESSORIES

PRODUCT FEATURES

- TRV's are designed to take air and distribute it in directions previously unfilled by primary air (the corners).
- By distributing the air in a more uniform pattern, the length of the throw in the primary directions is reduced by 20%.
- TRV's are attached to the core of the "D" diffuser and can be incorporated on all core sizes and patterns.

Standard air flow of a type "D" diffuser,
Core Pattern 41

Standard air flow of a type "D" diffuser,
with TRV's installed.
Core Pattern 41

All dimensions are in inches.
