

APPLICATION

- Grille / Register with integral filter compartment to allow "room-side" replaceable filter service
- Remove particulate at the zone level, extending life of central filter stations
- Models for both surface or suspended ceiling system installations
- Return filter grilles are typically located near the floor in sidewall applications.

PRODUCT FEATURES

- Available in 304 or 316 stainless steel, aluminum, or steel materials
- All Anemostat return grilles are available as hinged, filter assemblies, including grid core and perforated units. See page C-7 for core options.
- Construction available for filters 1" thick (models ending in -81) or 2" thick (models ending in -82). Filters are ordered separately (see page C-10).
- Outer frame and inner grille assembly are attached with a rugged, continuous style "piano" hinge.
- Aluminum and steel hinged grille assemblies are held closed with 1/4-turn, low profile, truss-head style fasteners (quantity and location vary with size). Note various hardware items may vary from grille material – consult submittal sheet for details.
- Registers include factory attached, front-operated opposed blade volume control damper (Model OB1). Damper material is same as grille material.
- Surface mounted units include clearance holes inside the neck for concealed fastening
- Standard hinge location is parallel to the width dimension, on top side. Deflected blades point away from hinge.
- Arctic white finish is standard on steel and aluminum filter grilles. Stainless steel grilles have a satin polish finish on exposed frame surfaces only – blades are 2B mill finish.
- Neck sizes from 6" x 6" up to 48" x 48"

FILTER GRILLE OPTIONS

- Removable grille option where grille separates from filter frame
- All filter grille accessories are available in steel, aluminum, or stainless steel (304 or 316) materials
- White epoxy
- Optional latches including knurled thumb screws or wire rings
- Opposed blade volume control dampers (Model **OB1**) can be different material than grille. Cable driven dampers available for remote operation.
- Factory supplied cleanable mesh filters – aluminum or stainless steel (see page C-10)
- Model **SRA** square to round adapters

PERFORMANCE DATA

- Add pressure drop of grille and filter to determine unit static pressure loss.

- Models shown are for Lay-in T-Bar ceiling systems. Substitute L for other ceiling types.
- Models constructed for 2" thick filters are designated as -82, example: S3HD-FPL-82, SS35HOD-FPT-82
- 1/2 x 1/2 x 1/2 Grid Core is always aluminum

APPLICATION

- Stainless steel filter grille designed for wash-down applications
- Grille / Register with integral filter compartment to allow "room-side" replaceable filter service
- Remove particulate at the zone level, extending life of central filter stations
- Return filter grilles are typically located near the floor in sidewall applications.

PRODUCT FEATURES

- Heavy 16 gauge 304 or 316 stainless steel construction
- Flat face border design is easily sealed at wall for a liquid tight installation – no miters at corners insure leak-proof design
- Units include clearance holes inside the neck for concealed fastening
- Perforated face pattern – 5/16" diameter holes on 7/16" centers, 46% free area
- Built-in filter stop for 1" or 2" thick filters (models ending in -81,-82). Filters are ordered separately (see page C-10).
- Outer frame and inner grille assembly are attached with a rugged, continuous style "piano" hinge.
- Hinged grille is held closed with 1/4-turn, knurled knobs (quantity and location vary with size).
- Standard hinge location is parallel to width dimension on top side.
- Satin polished finish on exposed face and frame surfaces only – 2B mill finish on all other surfaces.
- Neck sizes from 6" x 6" up to 24" x 24"

Top Hinge

Left Hand Hinge

OPTIONS

- Face-mounted filter rack – filter slides in behind hinged face
- Stainless steel front-operated opposed blade volume control damper (Model **OB1**). Factory welded to neck.
- Other latch configurations available including bail handles, wing head, and tool operated fasteners
- Weep holes as required
- Cable driven dampers available for remote operation
- Beveled, mitered, welded outer frame
- Factory supplied cleanable mesh filters – aluminum or stainless steel (see page C-10)
- Model **SRA** square to round adapters

APPLICATION

- Perforated ceiling return with integral filter compartment to allow "room-side" replaceable filter service
- Remove particulate at the zone level, extending life of central filter stations
- Models available for all suspended ceiling system installations

PRODUCT FEATURES

- Available in 304 or 316 stainless steel, aluminum, or steel materials
- Constructed for use with 1" filters (models ending in -81) or 2" filters (models ending in -82)
- Perforated face pattern – 3/16" diameter holes on 1/4" centers, 50% free area
- Hinged, removable face for easy room-side filter replacement – concealed hinge clips are steel for all applications.
- Filters are ordered separately (see page C-10).
- Arctic white finish is standard on steel and aluminum filter grilles. Stainless steel grilles have a satin polish finish on face only.

OPTIONS

- Face-operated, opposed blade volume control damper (Model **OB1**). Damper material is same as return material. Field installed.
- White face, black backpan.
- All filter grille accessories are available in steel, aluminum, or stainless steel (304 or 316) materials
- White epoxy
- Factory supplied cleanable mesh filters – aluminum or stainless steel (see page C-10).
