Test Standard

- ANSI / ASHRAE standard 70
- Isothermal air used during testing.

Throw

- The numbers shown are throw distances, in feet, measured from the diffuser relating to terminal velocities of 150,100, & 50 fpm, with the jet attached to the ceiling surface.
- Terminal velocity is the air speed, in feet per minute, measured in the supply air stream.

Sound Levels

- NC shown is the noise criteria curve that will not be exceeded at the operating point. This is determined by assuming a 10dB (ref: 10-12 watts) room attenuation that is subtracted from the power levels in each of the 2nd thru 7th octave bands.
- Inlet diameters with air velocities less than 750 feet per minute will not effect NC or throw distances as shown in performance tables.

Pressure

- PS represents static pressure, inches of water
